Sample motivation letter for master's degree in environmental engineering

Cover letter writing is an art. While there are suggested formats and samples to review, letters can vary widely. Perhaps the most important thing to remember is that the job of the cover letter is to get you an interview. It is not a repetition of your resume, though it should entice the reader to read your resume. The actual writing of the cover letter comes after researching the employer, reviewing and deconstructing the job description, and plugging yourself into the job description, i.e. selecting top areas of the job description where you have solid knowledge, skills and/or experience. Your goal should be to make the reader's task of evaluating you via a vis the job description easy. Remember that there may be various readers—an assistant with a checklist of qualifications, committee members who wrote the job description, or sometimes a computer scanner that counts key words. The below samples and outline will get you started or help you refine the letters you are already writing. Sample Project Manager Cover Letter (PDF) Dear Sir or Madam, I am writing to you because I would like to apply for enroll in the master's degree program in Water Science and Management starting in September 2016, pursuing in the Environmental Science track. I graduated with a bachelor's degree in Civil Engineering from the University of xxx in 2014. (UK, 2014). Based on my education and work experience, I believe that I am a suitable candidate for the program, and I hope to convince you of my capabilities in the following this letter.The reason I pursued undergraduate studied in civil engineering was because I believe d it to be is the discipline that shapes the world around us. My studies not only developed my problem-solving skills and deepened my knowledge in a variety of fields, they also led me to find develop a passion for hydrology . Once I find interesting problems I fully commit to understanding and solving them, which is why and to excel in modules such as 'Environmental Hydraulics' and 'Water Treatment and Management' in which my average grades exceeded 90%. Further research into water science and environmental issues focused increased my desire into shaping an interest in learning about the sustainable world that could prevail, in which we live in equilibrium with use of natural resources including our most valuable resource, water.I would like to study at xxx University because the as a research institute it is organized according to strategic themes indicating to me that the institution it is a progressive academic institute that and aims to find innovative solutions to the wicked challenging problems of the 21st century.I would like to live in Utrecht as I very much enjoy the atmosphere of small student cities that are busy all year round long with a large variety of student activities, just as Dundee was. And what better country to study water science and management in than a country that has public companies is a world leader in providing excellent universal access to water supply and sanitation? in good quality?Since graduation, I have been read ing extensively and informed ing myself about the complicated relationship between mankind and water. in the earth system. Books, such as Water Follies by Robert Jerome Glennon highlighted to me how interwoven our water consumption is with our economic system and social customs. As a consequence after reading the course outline for the Water Science and Management master's I am convinced the programme would provide me with the opportunity to learn further and deepen my understanding of the topic while approaching it from various perspectives. The ability to study science, management and governance aspects was key to my choice of this interdisciplinary programme.I want to take the Environmental Science track because the module Sustainability Science: Modelling and Indicators is appealing. Sustainability is becoming not only an importan aspect in everything we do, but a guide to how we should do things. For this reason I would like to learn how to use software to map out the interaction of the various factors, which I believe will also deepen my knowledge on local and international sustainability issues. I am also very interested in ecosystem modelling, as on one hand I find the various ecosystems to be found in water fascinating, and on the other hand I enjoy numerical modelling with Matlab and would like to learn more about it. For my bachelor thesis, "Numerical Study of Tsunami Generation and Propagation", I used Matlab to format the input and output data; having to learn it by myself was challenging but also very rewarding. The other course I am very interested in is Managing Future Deltas. Being As a volunteer in the Consorci Delta del Lobregat, I have realised that there are so many different aspects to deltas: they are incredibly rich and diverse, and hence numerous parties have interests in them. The management of the interested parties while realising and preserving the delta sounds very appealing to me.My academic performance averages 90% and over, including my bachelor thesis for which I was awarded an A1. After university, I wanted to gain practical knowledge, which is why I searched for an internship in a water-related field. I was accepted to work for Hölischer Wasserbau, a German dewatering company working on the new metro line (Metro Cityringen) and the Nyhaven project in Copenhagen. The 5-month-long experience taught me about the installation and maintenance of large-scale pumping systems and how they are influenced by local geology and its variations, advanced monitoring software (SCADA), water pollution and effective treatment and many more administrative aspects of the project.My interest in the field also shows through the extra-curricular activities I have been and am involved with. By helping start an Engineers Without Borders branch at Dundee University and organising events to raise funds for RedR and promote awareness of about issues such as lack of toilets and basic sanitation in developing countries, I wanted to explore the potential of engineering in humanitarian aid. Furthermore, as class representative and treasurer of the School of Engineering Physics and Mathematics, I was part of a team with the whose goal was of establishing a sense of community to increase open discussion and interdisciplinary interaction.While working in Barcelona to raise funds save up to go backpacking across New Zealand, where I plan to do some WWOFFING, I volunteered in different events such as Parking) Day and the Fair for Economic Solidarity.Looking back at 2010 when I left home full of excitement to undertake my undergraduate studies, I realize that the experience made me grow and evolve in many ways. Not only did I learn a lot academically, but my teachers and friends from all around the world also opened my mind to so many new concepts, points of view and ideas. Gaining work experience and traveling since graduation has allowed me to assess what I have learned and further develop and determine what direction I want to take in my professional life. Ten years from now, I envisage myself working as a hydrologist within a consultancy firm or water research institute with an international development focus. As I embark on my journey to reach that goal, I am convinced that your postgraduate course will provide me with all the necessary tools and experience to allow me to become an innovative and successful professional.In summary I believe that I have the required qualities for this course because , having graduated top of my class in Civil Engineering proves that I am a high-achieving, committed and hardworking person. My bachelor thesis made me develop my problem solving-skills and abilities to tackle and manage a big major tasks. I love being outdoors exploring nature and would relish the opportunity to further understand the environment, especially the aquatic habitat. Having grown up trilingual in English, Spanish and German and lived in the UK, Spain and Denmark, I am an open-minded and internationally orientated person.I believe I could be a valuable member of your team and can make a significant contribution to your program. Thank you very much for considering my application. I look forward to your positive response.Best regards,Note- I think you can safely delete the sentence I highlighted in yellow. What does WWOFFING mean? Write out the full form. Most university courses, from undergraduate degrees onwards, expect a fair bit from applicants. Not only does each course have set academic requirements and forms to fill out: most applicants will also be asked to provide examples of their work, a CV, and even undertake special course-specific preparatory exams. Many masters courses – especially some very competitive ones, like the top MBAs – encourage applicants to obtain letters of recommendation from senior colleagues or academic supervisors. Atop this sheaf of papers sits the most intimidating prospect of all: the motivational letter. Free Motivation letter templates for your first job application Free Motivation letter templates for an internship application A motivational letter, also known as a personal statement or a cover letter, is a short piece of writing all about you; your past, your ambitions, your personality, and your interests. While completing CVs and forms can be a little dry and boring, motivational letters can be hard to write. The combination of needing to produce such an intimate piece of writing, worded in such a way that it comes across as both authentic and professional, and then using it to sell yourself to a university, creates the perfect recipe for social awkwardness and writer's block. Despite the difficulty of writing a decent motivational letter, it's a fundamental skill in today's jobs market – once you leave full-time education, you'll need to write motivational letters to potential employers. With this in mind, writing a motivational letter for a masters degree is excellent practice. Below, we've prepared a couple of fail-safe techniques you can apply to writing a motivational letter so that it won't either sound sterile or arrogant, and will help you stand out from the crowd. Cover the basics: The central function of a motivational letter is to convince the admissions team at the university of your choice to offer you a place, or invite you to interview. Make sure that the letter is structured in such a way that it serves this purpose – it is usual to conclude a motivational letter by asking directly that you be admitted or invited for interview, depending upon what the next step of the admissions process is. Equally important is the calibre of your written language; if your motivational letter is riddled with grammatical errors or spelling mistakes, or doesn't make sense, the university will almost certainly refuse to admit you. A great starting point is to look at some templates for motivational letters in your chosen field, to see how they are structured, and what key points you need to cover. Get personal: A standard for all cover letters – including those for job-seekers – is that you must address your letter to a specific person. For your masters course, it could be the Head of Department, or the academic staff member responsible for your masters study programme. If you will be working closely with an academic supervisor – as with most research degrees – your cover-letter should be addressed to the academic you'd prefer to supervise you. Use the university's website to figure out who the right person is, and address the letter to them using their name and title. Show, don't tell: This is true of CVs, and is true of motivational letters too. "I am a good leader" sounds a lot weaker than "I led a group of my fellow students on a week long climbing expedition, where we successfully...". Avoid any overly ambiguous statements, as these can diminish the confidence the admissions team may have in your motivations. Also, make sure not to show things twice – if you've discussed something extensively in your CV, don't dwell on it in your motivational letter. Do your research: Academic institutions often have a lot to say about their values, priorities and vision. What's your target institution's motto? Do they prioritise sports, arts, or something else? Do they have a statement of values? How do you reflect these things? The most important question to think about in relation to these things – why is it that you want to go here? Weaving your knowledge of these things into your letter is a great way to assure admissions tutors that your choice to study at their institution is an informed one. Be specific: One of the biggest problems at application is that candidates don't adequately explain why it is they want to study what they've applied for. Remember, you've got to explain your choice of subject, and your choice of institution. Not just "Why Biology?" but "Why Biology at this university?" If you don't yet have answers to this question, then it is well worth going through the University's website again, to work out what inspired you to take the next step, and apply for your chosen course. Write a story: People love stories. They like to be taken on a journey, and brought to a satisfying conclusion. A list of superlatives or accomplishments is nowhere near as compelling as an epic story that weaves all that you've done into a coherent account, that supports the choice you've made to apply. Like all stories, make sure your motivational letter has a clear beginning, a middle, and an end. These should all follow logically on from one another, so that the reader is left feeling convinced of the suitability of your chosen course and institution, to your skills, experience, and goals. Be interesting: This is without doubt the most important feature of a motivational letter – you absolutely must capture the reader's interest. If you come across as boring (or worse, bored) on paper, it's much less likely that you'll get a positive reply. But furthermore, the interest you express has got to be personal, and it must relate directly to your motives. It's absolutely no use whatever to produce some bland, boring page or two about hard work and how interested you are in your subject. This is exactly what every other candidate will write, and for the most competitive courses, you will want to stand out. But the best way to do this is not to try to be someone else; be yourself. Mention the fact that you like juggling. Talk about how you felt when your father was laid off work. Begin from your earliest memory. So long as what you say relates to what makes you the person you are, and then why that person has chosen to apply for this course, it deserves to be there. What underscores all these points is a simple, and very ancient, piece of advice: know thyself. Nobody expects you to have everything figured out when you apply for a masters, but they will at least expect you to have a firm grasp of what you want out of the degree you've chosen to apply for. It's in nobody's interests for you to undertake courses for which they are ill-prepared, or that they haven't really thought through – all you need to do is show your chosen university that this doesn't apply to you. And let's face it; a masters degree is a fantastic opportunity, that will allow you to gain an expert understanding of a field about which you are passionate, and will build a bridge to a career that excites you – what could be easier to write about than that? But if you prefer to get some guidance, have a look at our motivational letter templates below. Example 1: Motivation Letter for a Masters of Science Degree (MSc) Dear sir /Madam, My name is [name] and most recently I have been working as a [job title] at [company name]. I hold a B.Sc degree in [subject] from [university name]. The undergraduate curriculum in [subject], [university name], introduced me to a wide variety of subjects in the field of [subject]. Various courses like [course 1], [course 2], [course 3] [name all relevant courses] provided me with a strong footing in [subject of the masters degree]. While offering both depth and breadth across this field, these courses put into perspective the importance and relevance of [subject] and the application of its fundamentals to the problems faced by the real world. I am much eager to adopt and know new technologies. I am really enthusiastic to attend a Master of [subject] at [university name] in order to understand different [subject] concepts and its applications to more complex real life situations. The good reputation of high-quality education standards, an extremely distinguished faculty members, and research facilities are the factors which have motivated me to apply for my masters studies at [university name]. Moreover, I feel I am responsible for making a big move in this field and this scholarship will give me a big chance to be one day someone who is remembered for his innovations. I think it is our duty as people sharing life in this world to make our future better because the future is not only ours. The next generation should be proud of us one day when they look back and find how hard we worked to make the world a better place. I believe my qualification and your needs would be an excellent fit. I will be happy to provide any further information or documents if required. I look forward to your positive response. Thank you for your time and consideration. Kind regards, Name Example 2: Motivation Letter for a Masters of Art Degree (M.A.) Dear Prof. [name], I am writing to inform you of my interest in the Masters of Arts [name] program at [university name]. I currently hold my Bachelor's of Arts in Art History [subject] from the University of [name], having graduated with cum laude with a GPA of 3.82 [grade]. After attending the University of [name], I completed a 3 month internship at the National Gallery in London (GB) followed by a 6 months internship at the Museum of Modern Art in New York (USA). During my studies and internships I developed a deep interest in Italian Art, with a particular focus on artists form the 17th century. Having worked under the supervision of Prof. [name] at the National Gallery enabled me to get a very deep understanding of [specific subject] and I see the Masters of Arts [name] program at [university name] as a unique opportunity to intensify my knowledge and continue my studies. Given my education and experience from [university name], National Gallery and Museum of Modern Art, I am confident that I am an excellent fit for the Masters of Arts [name] program at [university name]. I have researched the program and determined that the coursework and research profile of the college are a strong match. I'm particularly impressed by the volumes of [name] books in the university's library, which are of particular interest for me and which I would love to study in great detail. If you have any further questions, please contact me using the information at the top of this letter. Kind regards, Your name Did you know that most students apply to 5-7 different masters programs? The reasons for that are very simple: the more programs you apply to, the more options will you have to choose from in the end. You should therefore always apply to multiple programs. The best way to find alternative programs is to just search for them here on mastersavenue. It's free and super fast. Why don't you give it a go? Are you looking for more free tempaltes? -> Motivation letter templates for your first job application -> Motivation letter templates for an internship application
